[\[Help\]](#) **Online Restore IP restriction**

No IP restrictions defined.

Key :

| | |
|---|--|
| Name | Name of the backup set |
| Backup Source | Files/Directories that are to be included in or excluded from the backup set |
| Backup Schedule | Schedules when backup should be performed automatically |
| Enable In-File Delta | Enable In-File Delta backup feature |
| Block Size | Block size used to detect changes within backup files. |
| Minimum Size | In-File Delta backup will only be applied to files larger than this size |
| Delta Ratio | Delta ratio = Delta file size / full backup file size. If delta ratio is greater than this value, the full backup file will be uploaded instead (because there are too many changes already) |
| Enable Local Copy | Extra backup to local location, must be checked in order to have it's features enabled. |
| Zip copied file(s)? | Compressed all copied files |
| Copy to | An extra copy of all backup files is kept in this directory |
| Skip Offsite Backup | When enabled, the Offsite Backup will be skipped and only a local copy will be performed. |
| Set Local Copy Permission | When enabled, the local copy will retain the permission settings. |
| Retention Customization Policy | The number of days the old copies of updated or deleted files are to be retained in the retention area |
| Volume Shadow Copy | Enable volume shadow copy backup feature |
| Enable off-line backup | Enable off-line backup feature |
| Enable Logout Backup Reminder | Enable Logout Backup Reminder feature |
| Transfer Block Size | Block size of uploading backup block |
| Follow Symbolic Link | Whether symbolic links (in Unix/Linux) are to be followed in file selection |
| Network Resources Authentication for Windows | Windows domain name, username and password for getting access to protected resources |
| Pre-backup command | Commands that are to be run before running backup |
| Post-backup command | Commands that are to be run after running backup |
| Online Restore IP restriction | Block online file restoration based on IP address from which user is connecting to the server |
